SAAS SUBSCRIPTION ANALYSIS: Jan 2023 to Sep 2026

Live MRR	Logo Churn %	Collection Rate	Revenue Per Account
39.28M	15.4%	90.7%	3.74K

Key Findings

- Churn is a steady leak across the lifetime, not an onboarding problem, and it does not depend on tier.
- Price is the most expensive churn reason, and those customer leave unhappy (Avg Feedback score is 3.05)
- Revenue per account strongly depends on company size
- Organic brings the most total MRR, but outbound gives the highest value per account.
- About 91% of billed revenue is collected, steady across years.

Lifetime Bar Chart

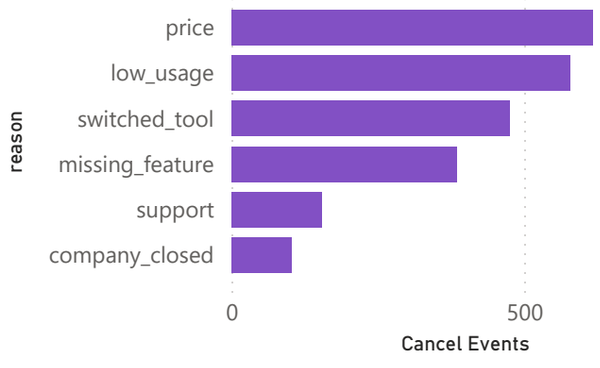

Share of subscriptions still alive by days since start (calculated in Python)

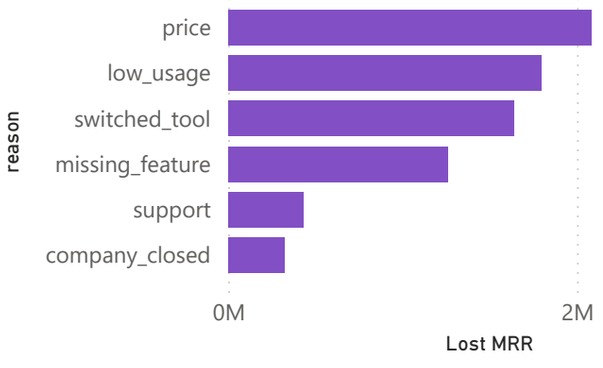

- Churn is a steady leak overtime and not an onboarding problem.
- Price cost the most MRR and those customers leave very unhappy.
- Support loses less MRR than almost all the other reasons, but when customers leave, they are equally unhappy.
- Most other leavers go neutrally.

Signup Cohorts

Signup Year	Accounts	Live Accounts	% Accounts Live
2023	1923	1540	80.1%
2024	2825	2327	82.4%
2025	3906	3431	87.8%
2026	3346	3194	95.5%
Total	**12000**	**10492**	**87.4%**

- Larger companies bring about the highest revenue per account, so revenue per account is highly reliant on company size.
- The organic channel has the highest total revenue, but has the second highest value per account.
- Older signup cohorts keep the lowest share live because they have had longer to churn.

Invoices are dated at random within each subscription's life. A subscription can have to invoice for the same period, and some are dated after a cancellation.
This page is for collections and repayment and not rebuilding monthly revenue.
